TRUSTEES.

RESIDENT OFFICERS.

NON-RESIDENT OFFICERS.

Commonwealth of Massachusetts.

TRUSTEES' REPORT.

To His Excellency the Governor and the Honorable Council.

The trustees of the Worcester Lunatic Hospital, in charge of the Worcester Insane Asylum, would respectfully present their seventeenth annual report. The reports of the superintendent and of the treasurer, submitted herewith, contain in detail the history of the management and of the finances of the asylum, and are made a part of this report.

Upon the resignation of the steward we have added his duties to those of the superintendent, with an increase in the salary of the latter.

We have undertaken a change in the administration building, which will increase somewhat its size and greatly improve its light and ventilation. Additional protection against fire has been provided. The wards are in excellent condition, and are taxed to their utmost to care for the great numbers of patients that have been transferred to us. Many times during the past year the wards have been crowded to their utmost capacity.

We would commend especially the constant and devoted attention of the superintendent during the changes that have taken place in the last year. An increased responsibility has fallen upon the assistant superintendent also from the same causes.

Respectfully submitted,

ALBERT WOOD,

Treasurer.

Worcester, Mass., Oct. 1, 1894.

WORCESTER, MASS., Oct. 27, 1894.

The undersigned has this day carefully compared the treasurer's statement of expenditures for the year ending Sept. 30, 1894, with the vouchers which are on file at the asylum, and finds it to be correct. He has also compared the amount of bills rendered for board of patients with the estimated earnings of the institution for one year, and finds them to agree.

GEO. L. CLARK,

Auditor of Accounts.

SUPERINTENDENT'S REPORT.

To the Trustees of the Worcester Lunatic Hospital, acting for the Worcester Insane Asylum.

I beg to present to your Board the seventeenth annual report of the superintendent of the Worcester Insane Asylum.

At the beginning of the present official year there remained in the asylum 454 patients, —231 males and 223 females. There have been admitted 30 males and 31 females, making a total of 515 cases. Of this number 1 male and 1 female have been discharged much improved, 2 males and 2 females improved, 2 males and 1 female not improved, and 22 males and 21 females have died. This leaves 234 males and 229 females —463 persons — as inmates of this institution Sept. 30, 1894. Of the persons admitted, 21 males came from the Worcester Lunatic Hospital, 9 males and 30 females from Taunton, and 1 female was returned from boarding out. Of those discharged, 1 male was transferred to the State Farm at Bridgewater, 1 male and 3 females were removed by the overseers of the poor, 1 male went to the Tewksbury Almshouse, 1 male and 1 female were discharged to the care of relatives, and 1 male escaped.

Over two-thirds of the admissions to this institution during the past year have been cases of chronic dementia. How little probability offers of the recovery of these people is evidenced both by the character and the long duration of their disease. The cities and towns, with their unhealthy and disturbing nervous influences, furnish proportionately the greater numbers, — nearly 74 per cent. Recent investigations in this line show that the numbers of the insane are not increasing in a rapid ratio in the country communities, if indeed they are increasing at all. In 14 of the admissions heredity is assigned as the

probable cause of mental disease. That hereditary influence plays a great part in the filling of our hospitals and asylums is shown by its yearly prominence in our statistical tables.

The amount of restraint has been less than in many former years, and there has been no case of continuous seclusion. Notwithstanding the liberty which has been allowed patients, but one successful escape has occurred. The earlier asylums were doubtless established more as places of incarceration for the detention of such insane persons as proved dangerous to the community, and of course were more like prisons than anything else. The insane have now come to be recognized as the victims of disease, whose commitment to a hospital is demanded that they may receive care and treatment. The hospital for the insane, while securing to the public that protection which it has a right to expect and to receive, should never degenerate into a prison; and the hospital attendant should partake of the character of nurse rather than of keeper. The selection of proper material for this branch of the service is not always easy. Knowledge and experience count for as much in the attendant upon the insane as in the trained nurse of general practice; and too close attention cannot be given in making choice of those persons who are to be most intimately associated with the patients, and whose influence is great to soothe or to excite the unstable minds with which they come in contact. The rate of compensation which it is at present possible to offer nurses is, in many cases, not sufficient to long retain the most desirable.

Although the institution has been greatly crowded, the general health of the house has been good. Several cases of measles have occurred, chiefly among the employees, a few patients being attacked. The character of the disease was mild, and no fatalities ensued. There has been little other acute disease of a serious nature.

A glance at the above table of mortality statistics shows the death rate at about its normal average. Phthisis has again been the chief cause of death.

Our system of ward ventilation is a good one, and quite satisfactory in its practical workings. The large number of patients cared for during the past few years, however, has taxed it to its utmost. The institution is at present lighted by gas, and during the long winter evenings the withdrawal of

the oxygen consumed in this way causes a very appreciable difference in the purity of the air, which is rendered still further unfit for respiration by being loaded with the products of combustion. If the electric light were introduced, not only would this source of atmospheric contamination be removed, but it would be possible, with the same power, to operate electric fans in any flue whose draft was faulty, causing a direct and positive circulation of air in those places most needed.

The operations of the past year in the way of repairs have been of a somewhat varied nature. Not the least in value has been the renovation of the old rooms in the south Johonnot wards, which have long been in an unsatisfactory condition. The dining-rooms in the south wings have been made over and new sinks put in. The work of reconstruction which has been going on in this asylum, and which has so greatly altered the character and increased the efficiency of the institution, has hitherto been directed chiefly to the wards. Early in the spring attention was turned to the administration building, where for many years little has been done in the line of repairs. The offices and waiting rooms were dark, and no adequate system of ventilation existed. The work of improvement has been undertaken here, and is now in progress. Considerable painting of the walls and ceilings has been done throughout the wards, which has not only rendered easier the maintenance of that proper cleanliness which is so essential to asylum existence, but has also added something to the attractiveness of the house. An additional line of high-service water pipe has been laid in the vard, and another hydrant put in. A stand-pipe connected with the same supply has also been introduced into the male wards, displacing the old low-pressure service, and considerable new hose purchased.

As in former years, patients have been largely employed in the work of the various departments. Admission to this institution being only by transfer from other hospitals, the most industrious, as would be expected, are rarely sent here, and it has often been more difficult to find workers than to furnish employment.

The average weekly cost of support has been \$3.04.

Regular entertainments have been held in the chapel during the winter, and have been greatly enjoyed by the patients. Religious services have been conducted as usual.

I desire to thank your Board for the assistance and support which has at all times been given me.

E. V. SCRIBNER,

Superintendent.

Worcester, Mass., Oct. 1, 1894.
